

PROJECT PROFILE

PROJECT:

BROADWAY BUILDING PARKING STRUCTURE ENTRANCE REPAIR
Salt Lake City, Utah

PROPERTY MANAGER OR OWNER:

HAMILTON PARTNERS
Salt Lake City, Utah

COMPLETION DATE:

FALL OF 2008

Facility:

Entrance and Exit of Broadway Building Parking Structure setting on the east side of the Broadway building located at 300 South and State Street in Salt Lake City, Utah.

Scope of Project:

The existing surface coating on the concrete was showing signs of wear. Adhesion tests were performed to insure the new coating would bond with the pre-existing surface coat. A new traffic bearing waterproof membrane system was installed at the entrance and exit of the parking structure. This was accomplished using a "Fast Cure" system over a period of 3 weekends which allowed the ticket booth to remain open at all times during the installation.

1. Entrance to parking structure at the Broadway Building
2. Existing coating at the ticket booth
3. Application of coating
4. Completed waterproof membrane system

CRS specializes in the maintenance and restoration of parking garages and building facades.
