

PROJECT PROFILE

PROJECT:

One Utah Parking Ramp
Salt Lake City

COMPLETION DATE:

Summer 2004

PROPERTY MANAGER:

Boyer Company
Salt Lake City

Facility:

The One Utah Parking Ramp is located between the east-bound traffic lanes of 200 South in downtown Salt Lake and serves as an entrance/exit for the One Utah Parking Garage.

Problem:

The ramp walls had problems with deteriorating concrete around the imbedded guardrails.

Solution:

CRS removed the spalled concrete from the walls and replaced it with new material to match the original shape and dimensions. A urethane coating was installed to help protect the concrete from further deterioration. CRS completed this project during non-business hours and maintained business-hours access to the parking garage for the duration of the project.
